Reflect on current career education system

Transform to meet current demands

Lead to respond to future opportunities

In the early 1900s, vocational education emerged in response to the burgeoning industrial era. Designed to train individuals with job-specific skills, vocational education helped drive our nation's economic engine throughout the 20th century. Today, vocational education is called Career and Technical Education (CTE). To be clear, CTE is not a new label for the same system.

Career and Technical Education is built upon the dynamic demands of the global economy, and CTE programs at the secondary, postsecondary, and adult levels prepare individuals for a wide range of careers, which include health care/bio-medical, renewable energy, hospitality, nanotechnology, engineering, logistics, law enforcement, and information technology. As a result, today's Career and Technical Education programs reflect the modern workplace. Since the majority of careers require a postsecondary credential, high-quality CTE programs incorporate rigorous academic and technical standards, as well as critical workplace skills such as problem solving, communication, and teamwork to ensure career and college readiness for its students.

Career and Technical Education has a positive impact on student achievement and transitions. These programs help students find their passion, bolster their confidence, and empower them to succeed. Additionally, CTE programs provide a positive return on investment and are trusted, long-standing partners with community employers. Since CTE programs can be found in rural, suburban, and urban communities in each state, CTE has the capacity and infrastructure to be the vehicle that prepares students of all ages for success in the ever-changing global economy. While many CTE program have evolved in the ways noted above, not all have. We have made much progress, but we can, and must, go further. Excellence in all of our programs is essential.

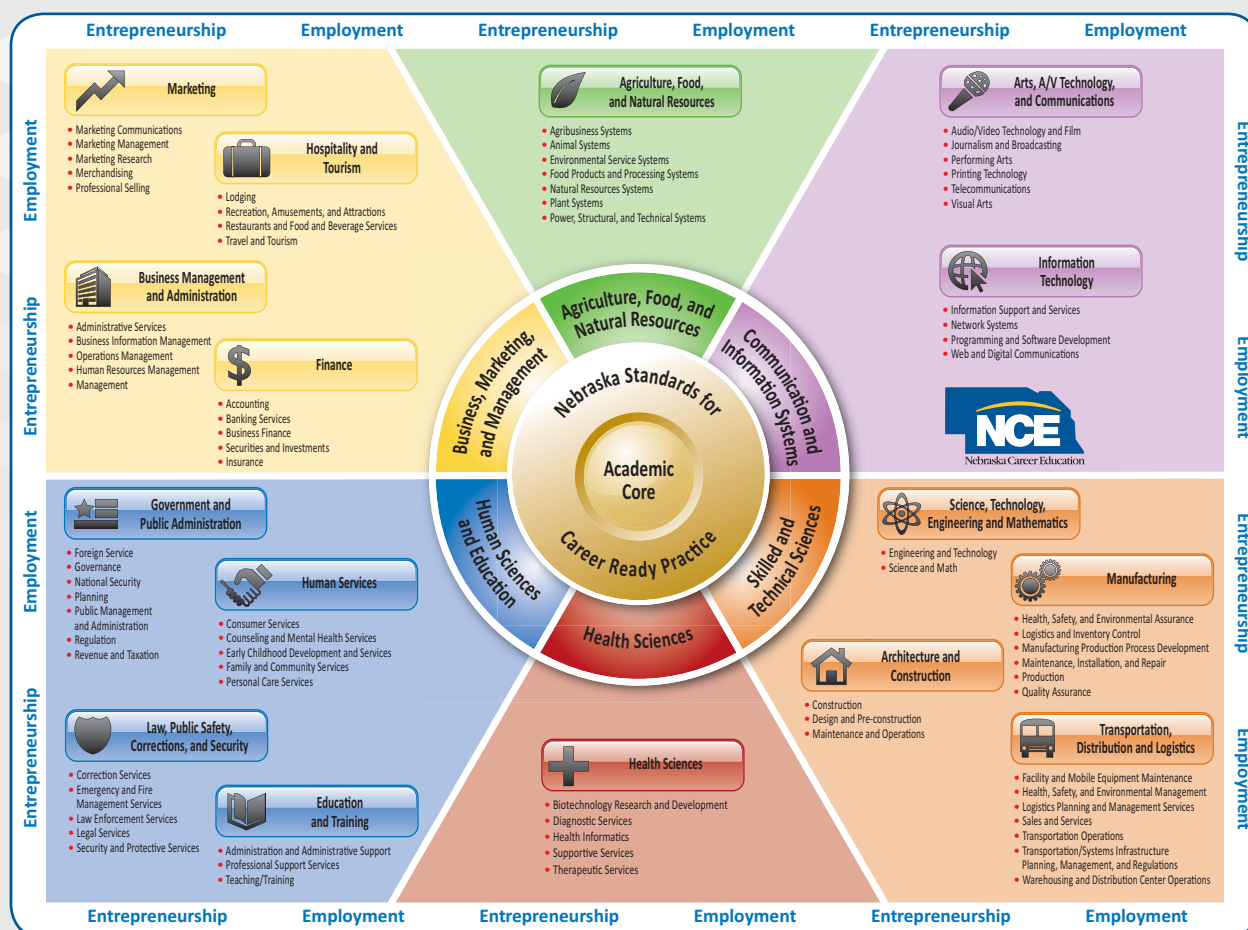

National Association of State Directors of Career Technical Education Consortium. (2010).

Reflect, transform, lead: A new vision for Career Technical Education. Silver Springs, Maryland.

Understanding the Nebraska Career Education Model

The Nebraska Career Education Model is based on the 16 career cluster model created by the U.S. Department of Education. The Nebraska model is an organizational structure for the curricular offerings available in Programs of Study. The model is also useful as a career awareness and exploration tool. It illustrates the diverse career opportunities within each of the career cluster areas. Successful career preparation builds from a strong academic base with the addition of technical skill and career readiness skill development.

For more NCE Model resources visit: www.education.ne.gov/nce/CareerClustersResources.html.

As of the 2012-2013 School Year, Standards Have Been Completed and Revised for all Programs of Study.

about reVISION

The **reVISION** process provides Nebraska schools with the opportunity to analyze and transform their current career education systems in order to improve their ability to educate a qualified workforce that meets industry needs within an ever-changing economy. Working in collaboration with postsecondary education and regional workforce/economic development leaders, the **reVISION** process links career educators, school administrators, guidance counselors, and industry professionals. Under the leadership of the Educational Service Unit and the Nebraska Department of Education, the **reVISION** process is a strategic approach for schools to analyze their current career education system and make plans, as needed, for adjustments.

During the **reVISION** process, schools will form a Career Education Leadership Team to help lead the **reVISION** process. This team should consist of at least TWO Career/Technical Education teachers (or all available), at least ONE school counselor, and at least ONE school administrator. Schools may also consider inviting ONE school board member or core teacher. The **reVISION** process involves participating in three face-to-face meetings facilitated by Nebraska Career Education staff. In addition, each school's Career Education Leadership team will complete work in partnership with a community engagement group between each meeting.

Outcomes of reVISION

Evaluate career guidance and exploration

- Availability and quality of K-12 career guidance
- Use of a career information system
- Use of career interest inventories and assessments
- On-going use of Personal Learning Plans
- Awareness of local and regional employment and entrepreneurial opportunities
- Effective college and career guidance based on selecting the right education for the right career choice

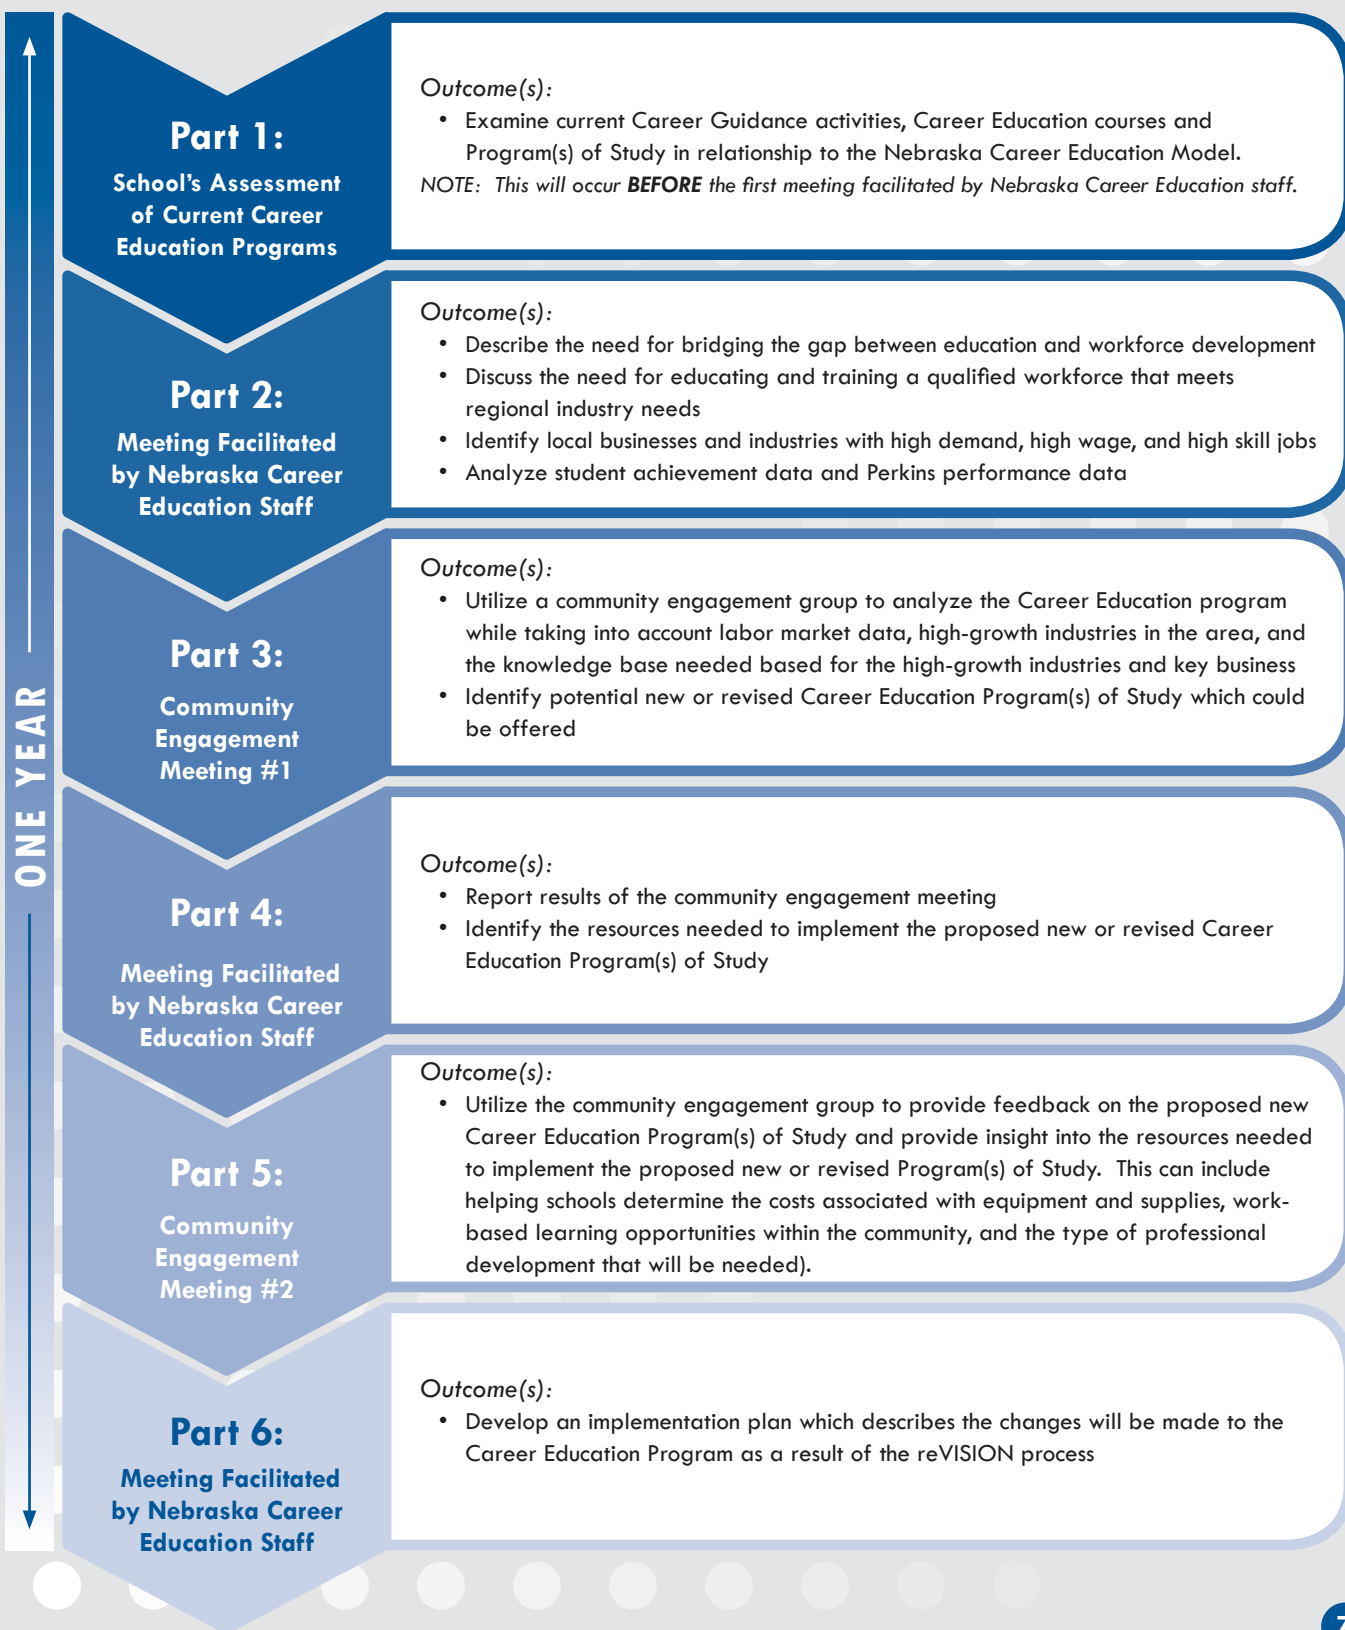

Align with local/regional/state workforce and economic development priorities

- Review local/regional/state workforce and economic data
- Create partnerships with workforce and economic development efforts
- Engage local and regional business representatives in career education programs
- Create opportunities for students to experience work in areas of career interest

Analyze and update current CTE programs of study and curricular offerings

- Evaluate current CTE programs of study and classes based on:
 - local/regional/state workforce and economic needs
 - state model Programs of Study
 - extended learning opportunities, such as work-based learning, career student organizations, etc.
 - alignment with postsecondary programs
- Create an action plan to add/change/drop current programs or study and course offerings based on reVISION work.

Sequence of Events

Career Development Process

Career development is for ALL students, is based on standards, and should be developmentally appropriate. Career development is interdependent with academic and personal/social development. By applying a combination of academic and personal/social skills in their everyday lives, students will be prepared for the demands of living in the 21st Century.

The career development process includes Career Awareness, Career Exploration, Career Preparation, Career Application, and Life-Long Career Management.

Career Awareness Curriculum

At the K-6 level, students will become aware of the six career fields. Students will attain foundational knowledge and skills that will prepare them to be successful in any career field.

Career Exploration

In the middle school curriculum, students will explore all 16 career clusters. Students will understand how foundational knowledge and skills apply to each cluster, have opportunities to practice these skills through career exploration activities, and explore entrance requirements for the wide variety of postsecondary options that are available.

Career Preparation and Application:

According to the NCE model, typical 9th and 10th grade students will be at the Career Preparation phase within the Career Development Process. Career Preparation includes course registration into high school Programs of Study that consider graduation, postsecondary requirements, and career cluster choices. Students will also be continuing the development and refinement of their foundational knowledge and skills. The Career Application phase begins in 11th and 12th grade, and it continues as students enter postsecondary education (2-year, 4-year, industry certifications, apprenticeships, etc). During this time, attention will be focused toward pathways in their chosen cluster and postsecondary Programs of Study or employment within that pathway. Seamless transition into the student's postsecondary choice will be facilitated by the use of a Personal Learning Plan.

Economic and Labor Market Analysis

The purpose of Nebraska Career Education is to provide career-based instruction and experiences that guide students through the cycle of career awareness, exploration, and preparation. Specifically, Career and Technical Education courses at the secondary level are offered through Programs of Study that prepare students for entry into postsecondary education, and ultimately, a successful career. State Programs of Study are aligned with the economic and workforce development needs of Nebraska.

In 2010, Nebraska completed a study of the economic drivers for our state. According to the Battelle Study, the following areas should be emphasized for Nebraska to remain economically viable and competitive. Local schools should consider the results of this study as well as local economic and workforce data when determining the Programs of Study to offer.

Key Findings of the Battelle Study

Battelle
The Business of Innovation

Nebraska has a diverse set of twelve primary industries that are driving the state's economic base. It is particularly important to focus on those industries that address the "wealth-creating" sectors of the state's economy. Specifically, the most effective way to advance the economic development of primary industries is to focus on industry clusters found within a state's economic base industries. The Battelle Study found that Nebraska is well-positioned in the fundamentals driving economic development in today's global knowledge-based economy. This includes Nebraska's current strengths, emerging strengths, and retention targets.

The Nebraska Department of Economic Development has targeted five primary industry clusters:

Agriculture & Food Processing
Financial Services & Insurance
Information Technology
Precision Manufacturing
Transportation, Warehousing, & Distribution Logistics.

Current Programs of Study offered at the local level should be reviewed based on a number of factors:

- Current labor market and employer information
- Projected employment opportunities in high skill, high wage, high demand occupations

The Nebraska Department of Economic Development website, Data and Research section, located at: <http://neded.org/business/data-a-research>, includes links to the Battelle Study: Nebraska Competitive Advantage Assessment and also other data you may want to consider.

Postsecondary Partnership

Providing students with a learning bridge from secondary to postsecondary is crucial to student success. The Programs of Study were designed to provide students with a ‘value-add’ course which could be available for state/national industry-based certification (employment) or dual credit with community colleges.

Nebraska has offered many articulated courses from high schools to area community colleges; unfortunately, there is a limited amount of research to support the benefit. On the other hand, dual credit has been identified as beneficial for high school students. Students that earn nine or more semester-based hours of college credit (academic or CTE) while in high school are more likely to graduate high school, matriculate into a postsecondary institution (2-year or 4-year), have a higher grade point average than their non-dual credit peers, and are more likely to return for their second year of college. Community College Research Study, Dual Enrollment Students in Florida and New York City: Postsecondary Outcomes (CCRC Brief No. 37)

Schools are encouraged to partner with their local postsecondary institutions in order to increase the offerings of dual credit courses within a Program of Study. Just as high schools operate under “local control,” so do Nebraska colleges and universities. In addition, they have to abide by accreditation bodies, similar to K-12 schools. Each postsecondary institution has the right to refuse to offer dual credit to any secondary institution or instructor for any reason.

Key Requirements and Concepts relating to Dual Credit Courses:

Dual Credit: The opportunity for high school students to take one course for both college and high school credit. High schools count these students in their average daily attendance. – Coordinating Commission for Postsecondary Education, Dual Enrollment Definition

Instructor Qualifications:

Academic and Transfer Content: A teacher must have a Master’s degree and 18 graduate hours in their content area. For example, teachers teaching Business, Marketing, and Management or Human Sciences and Education courses may have a Master’s degree in Curriculum and Instruction, but they must have an additional 18 graduate hours in their content area to be able to offer dual credit. In some instances, it is preferred for teacher to have a master’s degree in their content area. In the area of Business, Marketing, and Management, some community colleges require teacher’s to have an MBA in order to offer a dual credit course. Please contact your local community college representative for more information.

CTE Content: Most community colleges require a bachelor’s degree in the content area and years of experience.

Postsecondary Partnership

Transferability: While dual credit is more transferable than articulated (Tech Prep) credit, it is ultimately the responsibility of the student to contact his/her receiving institution to confirm if the dual credit will transfer.

Costs: Colleges and universities set their own price for dual credit.

Service Areas: The Nebraska Legislature determines the service area of postsecondary institutions. If the local cooperating postsecondary institution does not have a program or course available to offer for dual credit, please work with your local contact person to coordinate with another postsecondary institution which does.

part **THREE**

Community Engagement

Why?

The success of any action plan depends on having the right people at the table to contribute to the development of the plan. A community focus group is needed to help secure and analyze the data, review materials and make recommendations for the Programs of Study the school should offer. The group should also be involved in making recommendations for any changes to be made in current Programs of Study to align to local needs.

Who?

The initial community engagement group is not intended to be a long-term commitment for participants but rather an ad-hoc committee that meets to accomplish the task and then disbands.

Suggested representatives for community engagement include the following:

Community Members • Employers • Business Organizations • Chamber of Commerce • Local School Board • Students • Power Brokers • Postsecondary Partners • Local Government Organizations • Trade/Union Organizations • Parents • Economic Development Groups • Concerned Citizens

Name	Representing

Note: This is a great start to a career education advisory committee!

Community Engagement

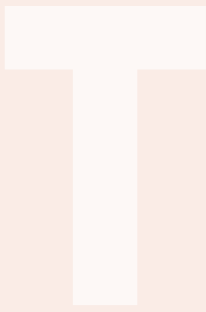

Conducting a SWOT Analysis

A SWOT analysis is used to highlight and identify Strengths, Weaknesses, Opportunities, and Threats. A SWOT analysis can be used as a part of community engagement meetings, focus group discussions, or follow-up to advisory committee meetings. This process is especially helpful in gaining honest perspectives from community members in order for schools to analyze their current career education system and make plans, as needed, for adjustments.

The process is simple and straightforward, yet powerful. The following is an example of how a SWOT analysis can be conducted at a community engagement meeting:

1. Have each community representative complete a SWOT analysis detailing their personal input on each of the quadrants in relation to the Career Education program.
2. Next, place the participants into small groups (4-6 per group) and have the small group merge their feedback into one list. Each group can do this on a flip chart.
3. After the small groups have created their lists, ask each group to share. While this is occurring, capture each group's responses on one SWOT chart. This creates a list of the Strengths, Weaknesses, Opportunities, and Threats in relation to the Career Education program.
4. Finally, recognize and celebrate strengths of the career education program while also "owning" the weaknesses or challenge areas. Using the weaknesses that were identified, generate a list of new opportunities that can drive future Program of Study enhancements and additions.

Community Engagement Results

Internal Factors	Strengths 	Weaknesses 
External Factors	Opportunities 	Threats 
	Positive Factors	Negative Factors

We want to hear from you!

Please share the results of your local action planning process with us.
Together, we can strengthen all Nebraska Career Education programs.

Email: nde.nce@nebraska.gov

It is the policy of the Nebraska Department of Education not to discriminate on the basis of gender, disability, race, color, religion, marital status, age or national origin in its education programs, administration, policies, employment or other agency programs.

This project was funded through the Carl D. Perkins Career and Technical Education Act of 2006, administered through the Nebraska Department of Education. However, the contents do not necessarily represent the policy of the United States Department of Education, and you should not assume endorsement by the Federal Government.
