
Advanced Placement[®] and Career and Technical Education: Working Together

The Advanced Placement Program (AP) prepares students for success in college and career—but more importantly, in life. And when students participate in career and technical education (CTE) in addition to AP, they’re setting themselves up for a successful future.

AP® and CTE courses can and should work in tandem to support career readiness by encouraging the development of the academic knowledge and technical skills that are, together, increasingly important to students’ overall employability. AP and CTE courses complement and supplement each other by letting students focus their high school coursework and training on career areas they aspire to work in. For too long, “college-ready” and “career-ready” coursework and experiences have been separate in our schools; the alignment of AP and CTE courses shows this divide only limits learners’ options.

At the same time, CTE students are increasingly pursuing postsecondary education and are just as likely to enroll in college as their non-CTE peers.

Georgetown’s Center on Education and the Workforce projects that by 2020:

of all jobs in the economy will require postsecondary education and training beyond high school

Through 2020, there will be:

55 million job openings

24 million from newly created jobs

31 million due to baby boomer retirements.

When students incorporate AP courses into their CTE programs of study, they’re engaging in challenging academic coursework that aligns with and supports their post-high school plans.

The College Board teamed up with Advance CTE and CTE directors from multiple states to consider how AP courses connect to the 16 Career Clusters listed in the National Career Clusters Framework®. The connections, outlined in the following pages, are a starting point for further discussion and innovative thinking at the school and district levels to align AP coursework with state- and locally developed CTE programs of study. The table below lists AP courses that could be embedded into a program of study, along with additional recommended courses.

GUIDING QUESTIONS

How can your state, district, or school do the following to promote rigorous coursework in high school:

- Communicate to students and families the connections between AP and CTE courses and the importance of rigorous coursework to success in all postsecondary opportunities?
- Remove barriers to ensure all students have access to both AP and CTE coursework?
- Support all students to succeed in both AP and CTE courses?
- Give teachers the necessary supports, professional developments, and certifications to teach both AP and CTE courses?
- Help students identify opportunities to take both AP and CTE courses during their academic planning?

EXAMPLES

In Maryland, the State Department of Education prepares students for college and career by developing certain CTE programs of study that are designed to leverage AP offerings in high schools. As the department develops specific CTE programs of study, it examines AP curricula to see if they align with the program's intent. If they do, they're infused into the program as one of the credits.

Maryland's CTE pathways include AP courses that students can use to complete their CTE program.

For example:

- Pre-Engineering—AP Computer Science Principles
- Computer Science—AP Computer Science Principles and AP Computer Science A
- Business, Management, and Finance—AP Microeconomics and AP Macroeconomics

Students can explore subjects that interest them by digging deeper into content and tapping into their creativity and problem-solving skills. Building these skills along with academic confidence powerfully complements CTE programs of study.

“It is a false premise to suggest you’re either an academic or career technical student. That is why we embed Advanced Placement courses into our career pathways. Students need to develop strong academic foundations regardless of their career pathway, so we cannot educate them in silos.”

—Dr. Lazaro Lopez,
Associate Superintendent for Teaching
and Learning, High School District 214,
Arlington Heights, Illinois

The Tennessee Department of Education also has incorporated AP classes into its CTE programs of study.

For example:

- Environmental and Natural Resource Management—AP Environmental Science
- Architectural and Engineering Design—AP Calculus and AP Physics
- Digital Arts and Design—AP Studio Art: 2-D Design
- Audio/Visual Production—AP English Language and Composition
- Accounting—AP Statistics
- Public Management and Administration—AP U.S. Government and Politics
- Coding—AP Computer Science Principles (CSP) and AP Computer Science A
- Web Design—AP CSP
- Cybersecurity—AP CSP
- Engineering—AP CSP or AP Physics
- Technology—AP CSP, AP Computer Science A, or AP Physics
- Prelaw—AP U.S. Government and Politics
- Advanced STEM Applications—AP Computer CSP, AP Computer Science A, AP Calculus AB/BC, AP Biology, AP Chemistry, or AP Physics

This table can serve as a guide. Courses listed in this table are only recommended coursework and should be individualized to meet each student's educational and career goals.

¹ "Potential to be Embedded into Program of Study" means these AP courses and exams could be included in the sequence of academic and technical content that address both academic and technical knowledge and skills that are aligned to industry needs.

² "Recommended" means these AP courses and exams may augment or support a program of study, and a student's post-high-school plans, but may not be appropriate to be embedded into a state- or locally developed Program of Study.

³ AP Capstone is a diploma program based on two yearlong AP courses: AP Seminar and AP Research. These courses use an interdisciplinary approach to develop the critical thinking, research, collaboration, time management, and presentation skills students need after high school.
