

CTEWORKS

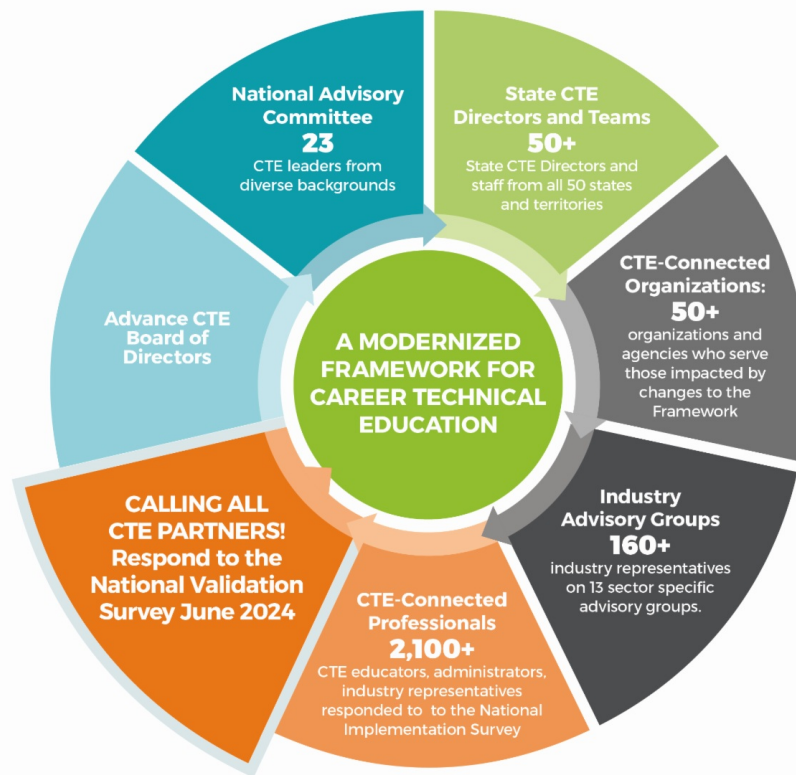

NEWS AND UPDATES

As we navigate an era marked by rapid change and unprecedented challenges, we have an important responsibility to ensure the future of Career Technical Education (CTE) can respond and support every learner.

To meet this challenge, we are breathing new life into a National Career Clusters® Framework, with a **draft modernized framework set to be unveiled in just a few days**. We are imagining educational pathways that accurately reflect both existing and emerging industry sectors, preparing learners for careers that are just on the horizon as they evolve alongside disruptions like artificial intelligence (AI) and significant shifts in workplace trends. And we are renewing our focus on designing CTE programs that recognize the lived experience and **meet the needs of every learner**.

In this edition of CTEWorks, explore updates on the Advancing the Framework modernization initiative, recaps of these forward-thinking conversations from 2024 Spring Meeting, and a selection of resources from Advance CTE and partners.

A National Career Clusters Framework Update: National Framework Validation Activities Open June 6

Over the past year, we have engaged thousands of CTE professionals to ideate and develop an update to the National Career Clusters Framework that was first established over two decades ago. We are now ready to share a draft modernized Framework with the entire CTE community!

On **Thursday, June 6th at 1:00 PM ET**, Advance CTE is hosting a public update webinar on the Career Clusters modernization that will unveil and walk through a draft Framework as well as discuss how Advance CTE will support the field on implementation in the years ahead.

A public validation survey will launch after the conclusion of the webinar.
